

5.10 In a certain fitness test for athletes, it is found that 10% of the athletes fail to complete the test. Of the next 15 athletes tested, find the probability that

- (a) from 3 to 6 fail;
- (b) fewer than 4 fail;
- (c) more than 5 fail.

a)
$$p(3 \le X \le 6) = \frac{6}{13} p(X = i) = \frac{6}{13} b(i; 15, 0.1)$$

$$= \frac{6}{13} b(i; 15, 0.1) - \frac{2}{13} b(i; 15, 0.1)$$

$$= 0.9999 - 0.8159 = 0.1836$$

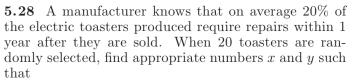

b)
$$P(X < 4) = \frac{2}{450} P(X = i) = \frac{2}{150} b(i) 15,0.1)$$

= 1.9444

C)
$$P(5 < X) = P(6 \le X) = 1 - P(5 < X) = 1 - P(6 \le X)$$

$$= 1 - \sum_{i=0}^{6} P(X = i) = 1 \sum_{i=0}^{6} b(i; 15, 0.1)$$

$$1 - 0 - 9991 = 0.0003$$

- (a) the probability that at least x of them will require repairs is less than 0.5;
- (b) the probability that at least y of them will not require repairs is greater than 0.8.

a)
$$f(XZX) < 0.5 = 1 - f(p < x) < 0.5 = 0.5 < f(X = x - 1)$$
0.5 < $f(x = 0) + f(x = 1) + \dots + f(x = x - 1)$

5.40 It is estimated that 4000 of the 10,000 voting residents of a town are against a new sales tax. If 15 eligible voters are selected at random and asked their opinion, what is the probability that at most 7 favor the new tax?

opinion, what is the probability that at most 7 favor
$$P = \frac{6000}{10,000} = 0.6$$

$$P(\chi = \chi) = h(\chi)/5, 0.6) = {\binom{5}{\chi}}0.6^{\chi}(1-0.6)^{(5-\chi)} = 0.1, --15$$

10000-4000= 6000

$$P(X \le 7) = \sum_{i=0}^{\infty} P(x=i) = \sum_{i=0}^{\infty} b(i)(5,0.6)$$

$$= 0.2131$$

5.80 Service calls come to a maintenance center acare received per minute. Find the probability that

(a) no more than 4 = 11 cording to a Poisson process, and on average, 2.7 calls

- カ= タモニン、アモ
- (a) no more than 4 calls come in any minute;
- (b) fewer than 2 calls come in any minute;
- (c) more than 10 calls come in a 5-minute period.

$$P(X=x) = e^{-\lambda t} \frac{(\lambda t)^{2}}{\chi t} = 0, 1, 2...$$

a)
$$P(\chi \le 4) = \frac{4}{2} e^{-2.1} \frac{(2.1)^{2}}{\chi_{1}} = 0.863$$

b)
$$\ell = 1$$
 $M = 2.7$
 $P(X < 2) = \sum_{n=0}^{\infty} e^{-2.7} (Z_1)^7 = 0.2487$

c)
$$\ell = 5$$
, $q = 2.7 \times 9 = 13.5$
 $P(XZ/0) = (-P(X \le 16))$
 $= 1 - \frac{69}{100} = -13.5 (13.5)^{2}$
